### Personal Code of AI Ethics

Principle	What I will do	What I will not do
Objective AI	I will be sure when making data driven decisions to include all relevant data pertaining to the criteria that is needed. I will do my best to identify and fix issues that arise that will skew my data because it is only grabbing information from a small group demographic.	I will not only grab information from a small majority that will skew my data and impact a small demographic for the majority.
Avoid AI Bias	I will be sure to not put into my research such bias to look for information from one section of race, gender, age etc. I will look for companies to join who consistently go into AI and fix bugs such as making errors and looking into a small portion of a population that impacts the greater population.	I will not work with companies who target specific groups to collect data that skew a research portfolio. I will not intentionally intake data in the same fashion that will skew my data to one specific demographic minipoint.
Private information security	My goal is to have a more noticeable and easily understandable consent to data being shared with other companies and such. A message that lets users know what information is being	I will not work with companies who do not let their users know that their information is being used without their consent or knowledge.

Principle	What I will do	What I will not do
	used/ sent to companies to compile information for use.	
AI fairness	I will look to see what companies have human oversight over their data since as of right now it is the only feasible option to eliminate bias in datasets.	I will stay away from companies that don't see a problem with bias in their datasets and don't routinely try and fix this issue.
Responsibility and accountability	I will be sure that if I make a mistake in my data collection that I own up to that and from there try to resolve the issue the best I can. This even being if i can not do it alone asking for help to fix what I messed up in the first place.	I will not avoid letting whoever needs to know that I made a mistake and need help fixing the issue at hand. I will not reap benefits for keeping my mouth shut and not telling anyone.
AI awareness	I will to the best of my ability inform my users, friends, family, and more about the positives to AI and its negatives so that they have a full understanding of what is happening when they agree to terms from companies.	I will not sit by and let people I know or my users be taken advantage of by companies and such to take their personal information and more without them knowing what is happening with that information.
Social media safeguards	On social media platforms do a deep dive into posts where there are slurs and more and so the best we can at making algorithms to weed out such language. Also algorithms to find AI bot accounts that spread fake information and hate and get rid of accounts.	One thing I will not do is not report a bot account. With this being said, so many people report these accounts it should make it easier to get rid of these bots and reduce the chance of them coming back. Do not just look past all this information and not use it the best it can be used.
